ABSTRACTED-PUB-NO: DE 10050417A

BASIC-ABSTRACT:

NOVELTY - New catalyst system encapsulated in wax comprises at least one catalyst (c) which catalyzes the reaction of polyisocyanates (a) with compounds (b) having at least two hydrogen atoms reactive to isocyanate groups.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for:

(1) Preparation of the catalyst system by taking up the catalysts (c) in molten wax and dispersing them in a polar liquid; (2) preparation of polyisocyanate/polyaddition products by reaction of (a) polyisocyanates with (b) high molecular compounds with at least two hydrogen atoms reactive to isocyanate groups, in the presence of (c) catalysts, and optionally (d) propellants, (e) chain extenders, and (f) adjuvants or additives, in which part or the whole of catalysts (c) is

encapsulated in wax.

USE - The catalyst system is useful for the preparation of polyisocyanate/polyaddition products (claimed), used for production of shaped articles (claimed), and for the production of polyurethanes.

ADVANTAGE - The catalyst system avoids some drawbacks of previous systems, e.g. limited catalyst concentration, e.g. in polyurethane preparation, formation of different acid/base equilibria between the catalysts, and corrosion of the processing machine due to acid released from the catalyst system.
